Ayush Satapathy

Bhubaneswar, India | +91 7008301609 | ayushsatapathy13@gmail.com | www.linkedin.com/in/ayush-satapathy

SUMMARY

Computer Science undergraduate with practical experience in backend engineering, systems automation, and email infrastructure. Proficient in Python, PHP, and relational databases, with a focus on writing clean, well-tested code, designing RESTful APIs, and maintaining reliable, high-availability services. Adept at debugging complex protocol-level issues and collaborating across engineering teams.

TECHNICAL SKILLS

- **Languages:** Python, PHP, Java, JavaScript, SQL, Go, HTML/CSS, Ruby
- **Backend & Web:** RESTful APIs, Relational Database Design and MySQL
- **Testing & Tools:** Git, GitHub, VS Code, PyTest, Unit Testing, Playwright
- **System & Networking:** SMTP, DNS, Email Protocols (SPF, DKIM, DMARC), Linux, CI/CD

EXPERIENCE

Software Engineer | VESPAR Media | Pune **Aug 2026 – Sep 2026**

- Developed backend services and optimized relational database queries (PHP/MySQL), reducing query latency and improving data handling reliability across core platform endpoints.
- Refactored core REST endpoints to adhere to MVC patterns, reducing average API payload sizes by 20% and improving response times.
- Authored modular pull requests with automated CI/CD checks, enforcing linting and test coverage standards prior to deployment.

Software Engineer | ASP OL Media | Nagpur **Oct 2025 – June 2026**

- Engineered internal CLI and web automation utilities to streamline verification pipelines across multi-tenant environments.
- Architected automated domain health and email infrastructure testing scripts using Python; configured DNS-level authentication records (SPF, DKIM, DMARC) and tuned SMTP pipelines to achieve consistent 98%+ inbox deliverability across multiple MTAs.

PROJECTS

Distributed Order & Payment Processing API | Python, PostgreSQL, Docker, PyTest

- Built an idempotent payment service using PostgreSQL transaction locks to resolve concurrency issues during checkouts.
- Designed a normalized relational schema with strict constraints and optimistic locking to enforce ACID compliance.
- Implemented Redis token-bucket rate limiting and async task queues to guard endpoints against traffic spikes.
- Achieved 92%+ test coverage with PyTest by mocking payment gateways to validate edge cases and retries.

Infrastructure & DNS Deliverability Monitor | Python, Playwright, SQL, Git

- Developed a multithreaded CLI tool to parse, validate, and monitor DNS records (MX, SPF, DMARC) and SMTP handshake latency across hundreds of domains.
- Automated alert notifications for domain reputation drops by logging raw socket responses and network metrics into a local relational database.
- Structured the codebase with modular exception handling, type annotations, and mock test suites to validate degraded network scenarios.

EDUCATION

GITA Autonomous College, Bhubaneswar **Nov 2022 - May 2026**

B.Tech in Computer Science and IT | CGPA: 7.9/10

- Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Computer Networks, Operating Systems.

CERTIFICATIONS

- Full Stack Developer–Upskill Campus
- Angular Full-Stack Development –Infosys Springboard
- SQL and Relational Databases 101 — IBM
